

This project utilises RFID/NFC technology to create a real-time attendance system that updates data directly into Google Sheets. This allows users to view and track their attendance effortlessly, making it an ideal solution for educational institutions, businesses, and events. The system is cost-effective, as NFC/RFID tags are cheaper than other attendance systems, and it provides a seamless way to manage attendance data.

2. Competitive Analysis

Feature	Traditional Attendance Systems	Biometric Fingerprint Attendance Systems	NFC/RFID Attendance System with Google Sheets
Referral Pic			
Cost	Medium to High	High	Low
Real-time cloud integration	No	No	Yes
Ease of use for tracking	Hard to maintain	Requires hardware and software setup	Simple Google Sheets interface
Maintenance and Scalability	Requires regular maintenance	Expensive and complex	Easily scalable and low-maintenance

3. GAP Analysis

- High-Cost Attendance Systems:** Existing systems like biometric and RFID solutions are expensive due to the hardware and proprietary software involved.
 - Lack of Real-Time Cloud Integration:** Most systems do not offer real-time updates to cloud platforms like Google Sheets, making data management more complex.
 - Limited Accessibility:** Traditional systems often require special software or devices to view attendance data, which restricts accessibility.
 - Market Opportunity:** There is a gap for a low-cost, easily accessible system that offers real-time cloud data updates without requiring expensive software or hardware.
-

system, and thus, a solution that integrates Google Sheets and low-cost RFID/NFC tags is ideal for him.
